Preface ............................................. VII
Motivation ......................................... VII
Aims, Readership and Book Structure ................. XII
Final Word and Acknowledgments ....................... XIV
Description of Contents by Chapter ..................... XIX

Abbreviations and Notation .......................... XXXV

Part I. BASIC DEFINITIONS AND NO ARBITRAGE

1. Definitions and Notation ........................ 1
   1.1 The Bank Account and the Short Rate ........ 2
   1.2 Zero-Coupon Bonds and Spot Interest Rates ... 4
   1.3 Fundamental Interest-Rate Curves ............ 9
   1.4 Forward Rates ................................ 11
   1.5 Interest-Rate Swaps and Forward Swap Rates .. 13
   1.6 Interest-Rate Caps/Floors and Swaptions ...... 16

2. No-Arbitrage Pricing and Numeraire Change ........ 23
   2.1 No-Arbitrage in Continuous Time .............. 24
   2.2 The Change-of-Numeraire Technique .......... 26
   2.3 A Change of Numeraire Toolkit
       (Brigo & Mercurio 2001c) ...................... 28
       2.3.1 A helpful notation: "DC" .................. 35
   2.4 The Choice of a Convenient Numeraire .......... 37
   2.5 The Forward Measure .......................... 38
   2.6 The Fundamental Pricing Formulas ............ 39
       2.6.1 The Pricing of Caps and Floors .......... 40
   2.7 Pricing Claims with Deferred Payoffs .......... 42
   2.8 Pricing Claims with Multiple Payoffs .......... 42
   2.9 Foreign Markets and Numeraire Change .......... 44

Table of Contents

3.13.2 The Extended Exponential-Vasicek Model ............... 131
3.14 An Example of Calibration to Real-Market Data ............. 132

4. Two-Factor Short-Rate Models ................................. 137
  4.1 Introduction and Motivation ................................. 137
  4.2 The Two-Additive-Factor Gaussian Model G2++ ............. 142
    4.2.1 The Short-Rate Dynamics ............................. 143
    4.2.2 The Pricing of a Zero-Coupon Bond .................. 144
    4.2.3 Volatility and Correlation Structures in Two-Factor
        Models .................................................. 148
    4.2.4 The Pricing of a European Option on a Zero-Coupon
        Bond ..................................................... 153
    4.2.5 The Analogy with the Hull-White Two-Factor Model .... 159
    4.2.6 The Construction of an Approximating Binomial Tree. 162
    4.2.7 Examples of Calibration to Real-Market Data .......... 166
  4.3 The Two-Additive-Factor Extended CIR/LS Model CIR2++ ... 175
    4.3.1 The Basic Two-Factor CIR2 Model ..................... 176
    4.3.2 Relationship with the Longstaff and Schwartz Model
        (LS) .................................................... 177
    4.3.3 Forward-Measure Dynamics and Option Pricing for
        CIR2 .................................................... 178
    4.3.4 The CIR2++ Model and Option Pricing .................. 179

5. The Heath-Jarrow-Morton (HJM) Framework ...................... 183
  5.1 The HJM Forward-Rate Dynamics ............................. 185
  5.2 Markovianity of the Short-Rate Process .................... 186
  5.3 The Ritchken and Sankarasubramanian Framework ............ 187
  5.4 The Mercurio and Moraleda Model .......................... 191

Part III. MARKET MODELS

6. The LIBOR and Swap Market Models (LFM and LSM) ......... 195
  6.1 Introduction .............................................. 195
  6.2 Market Models: a Guided Tour ............................. 196
  6.3 The Lognormal Forward-LIBOR Model (LFM) ................. 207
    6.3.1 Some Specifications of the Instantaneous Volatility of
        Forward Rates ......................................... 210
    6.3.2 Forward-Rate Dynamics under Different Numeraires .... 213
  6.4 Calibration of the LFM to Caps and Floors Prices ......... 220
    6.4.1 Piecewise-Constant Instantaneous-Volatility Structures 223
    6.4.2 Parametric Volatility Structures ..................... 224
    6.4.3 Cap Quotes in the Market ............................ 225
  6.5 The Term Structure of Volatility .......................... 226
    6.5.1 Piecewise-Constant Instantaneous Volatility Structures 228
# Table of Contents

6.5.2 Parametric Volatility Structures ........................................ 231
6.6 Instantaneous Correlation and Terminal Correlation ................. 234
6.7 Swaptions and the Lognormal Forward-Swap Model (LSM) .......... 237
   6.7.1 Swaptions Hedging ................................................. 241
   6.7.2 Cash-Settled Swaptions ........................................... 243
6.8 Incompatibility between the LFM and the LSM ......................... 244
6.9 The Structure of Instantaneous Correlations ......................... 246
   6.9.1 Some convenient full rank parameterizations ................. 248
   6.9.2 Reduced-rank formulations: Rebonato’s angles and eigen-
values zeroing ............................................................ 250
   6.9.3 Reducing the angles ............................................... 259
6.10 Monte Carlo Pricing of Swaptions with the LFM ..................... 264
6.11 Monte Carlo Standard Error ............................................. 266
6.12 Monte Carlo Variance Reduction: Control Variate Estimator .... 269
6.13 Rank-One Analytical Swaption Prices .................................. 271
6.14 Rank-r Analytical Swaption Prices ...................................... 277
6.15 A Simpler LFM Formula for Swaptions Volatilities ................. 281
6.16 A Formula for Terminal Correlations of Forward Rates ............ 284
6.17 Calibration to Swaptions Prices ......................................... 287
6.18 Instantaneous Correlations: Inputs (Historical Estimation) or 
   Outputs (Fitting Parameters)? ......................................... 290
6.19 The exogenous correlation matrix ....................................... 291
   6.19.1 Historical Estimation ............................................. 292
   6.19.2 Pivot matrices ................................................... 295
6.20 Connecting Caplet and $S \times 1$-Swaption Volatilities ............ 300
6.21 Forward and Spot Rates over Non-Standard Periods ............... 307
   6.21.1 Drift Interpolation .............................................. 308
   6.21.2 The Bridging Technique ......................................... 310

7. Cases of Calibration of the LIBOR Market Model ....................... 313
   7.1 Inputs for the First Cases ........................................... 315
   7.2 Joint Calibration with Piecewise-Constant Volatilities as in 
      TABLE 5 .............................................................. 315
   7.3 Joint Calibration with Parameterized Volatilities as in For-
      mulation 7 ............................................................ 319
   7.4 Exact Swaptions “Cascade” Calibration with Volatilities as 
      in TABLE 1 ............................................................ 322
      7.4.1 Some Numerical Results ....................................... 330
   7.5 A Pause for Thought .................................................. 337
      7.5.1 First summary .................................................. 337
      7.5.2 An automatic fast analytical calibration of LFM to 
      swaptions. Motivations and plan ................................. 338
   7.6 Further Numerical Studies on the Cascade Calibration Algo-
      rithm ................................................................. 340
Table of Contents

7.6.1 Cascade Calibration under Various Correlations and Ranks ........................................ 342
7.6.2 Cascade Calibration Diagnostics: Terminal Correlation and Evolution of Volatilities ............. 346
7.6.3 The interpolation for the swaption matrix and its impact on the CCA ................................. 349
7.7 Empirically efficient Cascade Calibration .......................................................... 351
  7.7.1 CCA with Endogenous Interpolation and Based Only on Pure Market Data ........................ 352
  7.7.2 Financial Diagnostics of the RCCAEI test results .................................................. 359
  7.7.3 Endogenous Cascade Interpolation for missing swaptions volatilities quotes ..................... 364
  7.7.4 A first partial check on the calibrated $\sigma$ parameters stability ............................... 364
7.8 Reliability: Monte Carlo tests ................................................................................. 366
7.9 Cascade Calibration and the cap market ..................................................................... 369
7.10 Cascade Calibration: Conclusions  ........................................................................... 372

8. Monte Carlo Tests for LFM Analytical Approximations .............................................. 377
  8.1 First Part. Tests Based on the Kullback Leibler Information (KLI) ................................. 378
    8.1.1 Distance between distributions: The Kullback Leibler information ............................... 378
    8.1.2 Distance of the LFM swap rate from the lognormal family of distributions .................. 381
    8.1.3 Monte Carlo tests for measuring KLI ........................................................................ 384
    8.1.4 Conclusions on the KLI-based approach ................................................................ 391
  8.2 Second Part: Classical Tests .................................................................................. 392
  8.3 The “Testing Plan” for Volatilities ......................................................................... 392
  8.4 Test Results for Volatilities .................................................................................. 396
    8.4.1 Case (1): Constant Instantaneous Volatilities ......................................................... 396
    8.4.2 Case (2): Volatilities as Functions of Time to Maturity ........................................ 401
    8.4.3 Case (3): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity ................................................................. 410
  8.5 The “Testing Plan” for Terminal Correlations ......................................................... 421
  8.6 Test Results for Terminal Correlations .................................................................. 427
    8.6.1 Case (i): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Typical Rank-Two Correlations ...................... 427
    8.6.2 Case (ii): Constant Instantaneous Volatilities, Typical Rank-Two Correlations ............ 430
    8.6.3 Case (iii): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Some Negative Rank-Two Correlations .............. 432
8.6.4 Case (iv): Constant Instantaneous Volatilities, Some Negative Rank-Two Correlations 438
8.6.5 Case (v): Constant Instantaneous Volatilities, Perfect Correlations, Upwardly Shifted $\Phi$’s 439
8.7 Test Results: Stylized Conclusions 442

Part IV. THE VOLATILITY SMILE

9. Including the Smile in the LFM 447
  9.1 A Mini-tour on the Smile Problem 447
  9.2 Modeling the Smile 450

10. Local-Volatility Models 453
    10.1 The Shifted-Lognormal Model 454
    10.2 The Constant Elasticity of Variance Model 456
    10.3 A Class of Analytically-Tractable Models 459
    10.4 A Lognormal-Mixture (LM) Model 463
    10.5 Forward Rates Dynamics under Different Measures 467
        10.5.1 Decorrelation Between Underlying and Volatility 469
    10.6 Shifting the LM Dynamics 469
    10.7 A Lognormal-Mixture with Different Means (LMDM) 471
    10.8 The Case of Hyperbolic-Sine Processes 473
    10.9 Testing the Above Mixture-Models on Market Data 475
    10.10A Second General Class 478
    10.11A Particular Case: a Mixture of GBM’s 483
    10.12 An Extension of the GBM Mixture Model Allowing for Implied Volatility Skews 486
    10.13A General Dynamics à la Dupire (1994) 489

11. Stochastic-Volatility Models 495
    11.1 The Andersen and Brotherton-Ratcliffe (2001) Model 497
    11.3 The Piterbarg (2003) Model 504
    11.5 The Joshi and Rebonato (2003) Model 513

12. Uncertain-Parameter Models 517
    12.1 The Shifted-Lognormal Model with Uncertain Parameters (SLMUP) 519
        12.1.1 Relationship with the Lognormal-Mixture LVFM 520
    12.2 Calibration to Caplets 520
    12.3 Swaption Pricing 522
    12.4 Monte-Carlo Swaption Pricing 524
    12.5 Calibration to Swaptions 526
Part V. EXAMPLES OF MARKET PAYOFFS

13. Pricing Derivatives on a Single Interest-Rate Curve
   13.1 In-Arrears Swaps
   13.2 In-Arrears Caps
      13.2.1 A First Analytical Formula (LFM)
      13.2.2 A Second Analytical Formula (G2++)
   13.3 Autocaps
   13.4 Caps with Deferred Caplets
      13.4.1 A First Analytical Formula (LFM)
      13.4.2 A Second Analytical Formula (G2++)
   13.5 Ratchet Caps and Floors
      13.5.1 Analytical Approximation for Ratchet Caps with the LFM
   13.6 Ratchets (One-Way Floaters)
   13.7 Constant-Maturity Swaps (CMS)
      13.7.1 CMS with the LFM
      13.7.2 CMS with the G2++ Model
   13.8 The Convexity Adjustment and Applications to CMS
      13.8.1 Natural and Unnatural Time Lags
      13.8.2 The Convexity-Adjustment Technique
      13.8.3 Deducing a Simple Lognormal Dynamics from the Adjustment
   13.9 Average Rate Caps
   13.10 Captions and Floortions
   13.11 Zero-Coupon Swaptions
   13.12 Eurodollar Futures
      13.12.1 The Shifted Two-Factor Vasicek G2++ Model
      13.12.2 Eurodollar Futures with the LFM
   13.13 LFM Pricing with “In-Between” Spot Rates
   13.13.1 Accrual Swaps
   13.13.2 Trigger Swaps
   13.14 LFM Pricing with Early Exercise and Possible Path Dependence
   13.15 LFM: Pricing Bermudan Swaptions
      13.15.1 Least Squared Monte Carlo Approach
      13.15.2 Carr and Yang’s Approach
# Table of Contents

13.15.3 Andersen's Approach ........................................... 592
13.15.4 Numerical Example ............................................. 595
13.16 New Generation of Contracts ..................................... 601
  13.16.1 Target Redemption Notes .................................... 602
  13.16.2 CMS Spread Options .......................................... 603

14. Pricing Derivatives on Two Interest-Rate Curves ............... 607
  14.1 The Attractive Features of G2++ for Multi-Curve Payoffs .... 608
  14.1.1 The Model ................................................... 608
  14.1.2 Interaction Between Models of the Two Curves “1” and “2” ......................................................... 610
  14.1.3 The Two-Models Dynamics under a Unique Convenient Forward Measure ............................................. 611
  14.2 Quanto Constant-Maturity Swaps ................................ 613
  14.2.1 Quanto CMS: The Contract ................................... 613
  14.2.2 Quanto CMS: The G2++ Model ................................ 615
  14.2.3 Quanto CMS: Quanto Adjustment ............................ 621
  14.3 Differential Swaps ................................................ 623
  14.3.1 The Contract .................................................. 623
  14.3.2 Differential Swaps with the G2++ Model .................... 624
  14.3.3 A Market-Like Formula ....................................... 626
  14.4 Market Formulas for Basic Quanto Derivatives ................. 626
  14.4.1 The Pricing of Quanto Caplets/Floorlets .................... 627
  14.4.2 The Pricing of Quanto Caps/Floors .......................... 628
  14.4.3 The Pricing of Differential Swaps ........................... 629
  14.4.4 The Pricing of Quanto Swaptions ............................ 630
  14.5 Pricing of Options on two Currency LIBOR Rates ............ 633
  14.5.1 Spread Options .............................................. 635
  14.5.2 Options on the Product ...................................... 637
  14.5.3 Trigger Swaps ............................................... 638
  14.5.4 Dealing with Multiple Dates ................................. 639

22. **Intensity Models** .......................................................... 757
   22.1 Introduction and Chapter Description ............................ 757
   22.2 Poisson processes ....................................................... 759
       22.2.1 Time homogeneous Poisson processes ....................... 760
       22.2.2 Time inhomogeneous Poisson Processes .................... 761
       22.2.3 Cox Processes ..................................................... 763
   22.3 CDS Calibration and Implied Hazard Rates/ Intensities .... 764
   22.4 Inducing dependence between Interest-rates and the default event ......................................................... 776
   22.5 The Filtration Switching Formula: Pricing under partial information ......................................................... 777
   22.6 Default Simulation in reduced form models ................. 778
       22.6.1 Standard error ..................................................... 781
       22.6.2 Variance Reduction with Control Variate ............... 783
   22.7 Stochastic Intensity: The SSRD model ..................... 785
       22.7.1 A two-factor shifted square-root diffusion model for intensity and interest rates (Brigo and Alfonsi (2003)) . 786
       22.7.2 Calibrating the joint stochastic model to CDS: Separability............................................................. 789
       22.7.3 Discretization schemes for simulating \((\lambda, r)\) ........ 797
       22.7.4 Study of the convergence of the discretization schemes for simulating CIR processes (Alfonsi (2005)) ....... 801
       22.7.5 Gaussian dependence mapping: A tractable approximated SSRD.......................................................... 812
       22.7.6 Numerical Tests: Gaussian Mapping and Correlation Impact ................................................................. 815
       22.7.7 The impact of correlation on a few “test payoffs” .... 817
       22.7.8 A pricing example: A Cancellable Structure .......... 818
       22.7.9 CDS Options and Jamshidian’s Decomposition .......... 820
       22.7.10 Bermudan CDS Options ........................................ 830
### 22.8 Stochastic diffusion intensity is not enough: Adding jumps
- The JCIR(++) Model .................................................. 830
- 22.8.1 The jump-diffusion CIR model (JCIR) .......................... 831
- 22.8.2 Bond (or Survival Probability) Formula......................... 832
- 22.8.3 Exact calibration of CDS: The JCIR++ model .................. 833
- 22.8.4 Simulation ...................................................... 833
- 22.8.5 Jamshidian’s Decomposition ................................. 834
- 22.8.6 Attaining high levels of CDS implied volatility ............. 836
- 22.8.7 JCIR(++) models as a multi-name possibility ............. 837

### 22.9 Conclusions and further research ................................. 838

### 23. CDS Options Market Models ....................................... 841
- 23.1 CDS Options and Callable Defaultable Floaters ............... 844
  - 23.1.1 Once-callable defaultable floaters .......................... 846
- 23.2 A market formula for CDS options and callable defaultable
  floaters ............................................................... 847
  - 23.2.1 Market formulas for CDS Options .......................... 847
  - 23.2.2 Market Formula for callable DFRN ......................... 849
  - 23.2.3 Examples of Implied Volatilities from the Market ....... 852
- 23.3 Towards a Completely Specified Market Model .................. 854
  - 23.3.1 First Choice. One-period and two-period rates ........... 855
  - 23.3.2 Second Choice: Co-terminal and one-period CDS rates
    market model ....................................................... 860
    - 23.3.3 Third choice. Approximation: One-period CDS rates
      dynamics ......................................................... 861
  - 23.4 Hints at Smile Modeling ........................................ 863
- 23.5 Constant Maturity Credit Default Swaps (CMCDS) with the
  market model ....................................................... 864
  - 23.5.1 CDS and Constant Maturity CDS ........................... 864
  - 23.5.2 Proof of the main result ................................ 867
  - 23.5.3 A few numerical examples ................................ 869

### Part VIII. APPENDICES

#### A. Other Interest-Rate Models ................................... 877
- A.1 Brennan and Schwartz’s Model .................................. 877
- A.2 Balduzzi, Das, Foresi and Sundaram’s Model .................... 878
- A.3 Flesaker and Hughston’s Model ................................ 879
- A.4 Rogers’s Potential Approach ................................... 881
- A.5 Markov Functional Models ...................................... 881
LIV Table of Contents

B. Pricing Equity Derivatives under Stochastic Rates ........ 883
   B.1 The Short Rate and Asset-Price Dynamics ................. 883
      B.1.1 The Dynamics under the Forward Measure .......... 886
   B.2 The Pricing of a European Option on the Given Asset .... 888
   B.3 A More General Model .................................. 889
      B.3.1 The Construction of an Approximating Tree for $r$ .. 890
      B.3.2 The Approximating Tree for $S$ .................... 892
      B.3.3 The Two-Dimensional Tree ......................... 893

C. A Crash Intro to Stochastic Differential Equations and Poisson Processes ........................................ 897
   C.1 From Deterministic to Stochastic Differential Equations .... 897
   C.2 Ito's Formula ......................................... 904
   C.3 Discretizing SDEs for Monte Carlo: Euler and Milstein Schemes 906
   C.4 Examples ............................................. 908
   C.5 Two Important Theorems ................................ 910
   C.6 A Crash Intro to Poisson Processes ...................... 913
      C.6.1 Time inhomogeneous Poisson Processes ............. 915
      C.6.2 Doubly Stochastic Poisson Processes (or Cox Processes) 916
      C.6.3 Compound Poisson processes ....................... 917
      C.6.4 Jump-diffusion Processes ......................... 918

D. A Useful Calculation ...................................... 919

E. A Second Useful Calculation ............................... 921

F. Approximating Diffusions with Trees ....................... 925

G. Trivia and Frequently Asked Questions .................... 931

H. Talking to the Traders .................................... 935

References .................................................. 951
